Call log

Quick Start Guide
Alcatel-Lucent Rainbow for iOS

Manage incoming calls efficiently

Caller identification

Add video

Reject the call

VoIP call
(not through the company telephony system)

Incoming call on your business phone number (through the company telephony system)

Make or take a second call

Caller on hold

Mute yourself

Escalate to three-party conference

Switch between callers

Transfer the call

Make business calls

To enter a number use the dial pad

Search for a contact, then select the type of call you would like to initiate

Make an audio or video VoIP call (this type of call does not use the company telephony system or calling plan)

Make a call to the work or personal number (using a regular calling-plan or business telephony system)

Bubbles and Web conferencing

- Create and operate bubbles (working groups) with both internal and external guests

- At any time, you can launch a web conference with all the participants in a bubble

- Add video

- Switch between front and back camera

- Web conferencing makes it easy to mix voice, video and screen sharing for all participants

- Participants can join a conference via their web browser, mobile device, Rainbow client (Windows or Mac), or through our Rainbow Room solution

- Enlarge the picture of any participant

- Have any participant share their screen
